Logical Separation

The system is decoupled to ensure maintainability and high performance at scale.

Presentation: React.js Single Page App

Application: Express.js & Node.js Middleware

Data: MongoDB Atlas Cloud Storage

| React: Component-Driven UI

Atomic Design

Reusable components (Cards, Navs, Modals) for consistency across the entire user interface.

State Logic

Efficient management of cart items and user sessions using React Hooks (useState/useEffect).

Client Routing

Instant page transitions without reloading, providing a smooth app-like experience.

| Express & Node: High Performance

99.9%

UPTIME

<150ms

API LATENCY

10k+

CONCURRENT OPS

The backend leverages Node's non-blocking I/O for exceptional throughput and speed.

MongoDB: Scalable Data Layer

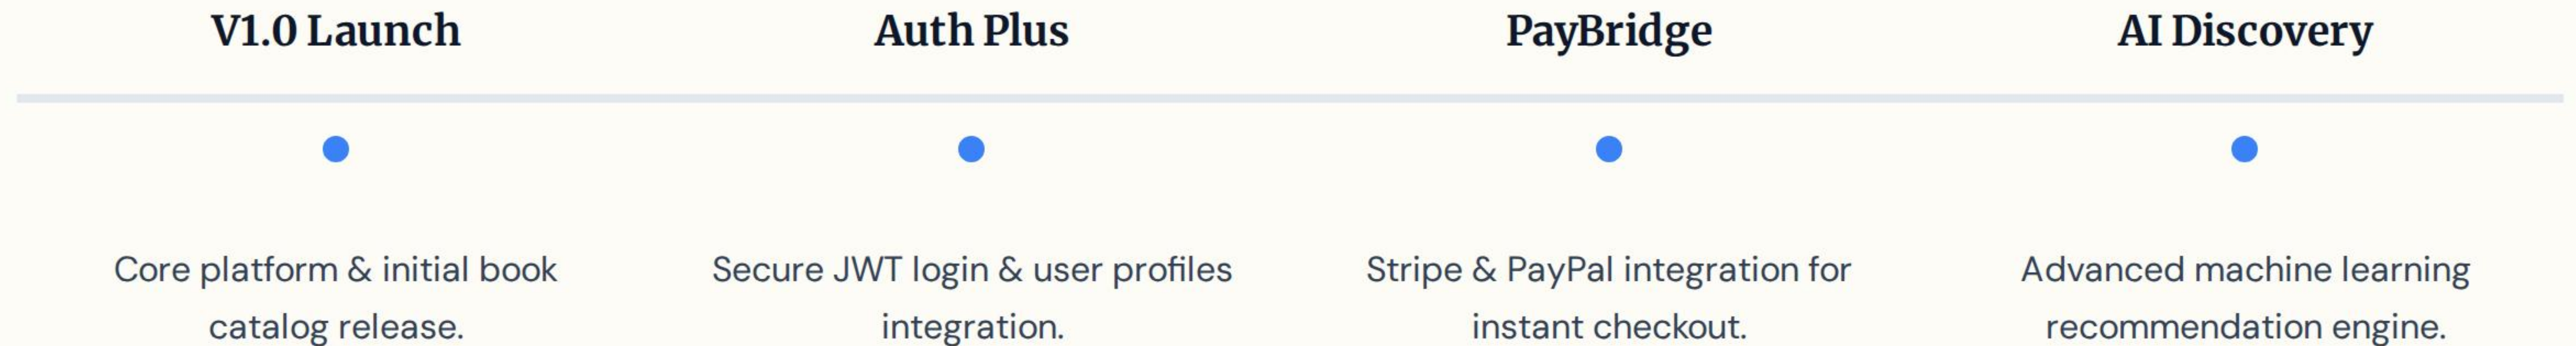

Forecasted growth in book catalog volume and user interaction events, handled gracefully by MongoDB's dynamic schema.
